Austria

Retail Food Sector

Annual

2008

Approved by:

Bobby Richey
U.S. Embassy, Vienna

Prepared by:

Roswitha Krautgartner

Report Highlights:

In 2008, prices for major food commodities in Austria underwent a substantial increase, driven by growing demand as well as increasing energy prices. For the next years, prices for food products are expected to remain substantially above recent levels. Expenditures for food products are not expected to decline. In 2007, consumer expenditures for food and non-alcoholic beverages amounted to Euro 15.6 billion in Austria. This was up 1.97 % compared to 2006.

SECTION I. MARKET SUMMARY

Austria is a small market with slightly more than 8 million people. However, the living standard is high which results in a strong demand for high quality products and luxury articles. Foods and beverages from Austria, Germany, and other EU countries dominate the shelves of the country's retail outlets. The reason for this is primarily the duty-free movement of goods amongst EU members, transportation advantages, existing business ties, and the fact that legal food requirements are the same within the EU. Despite the challenges, there are some market opportunities for the United States, particularly in the prime quality sector.

The Austrian economy has consistently performed better than the EU average but growth will be weaker in 2009. In the context of the global economic slowdown, the Austrian economy has also begun to lose momentum. In Austria, GDP grew only by a mere 0.4 percent in real terms quarter-on-quarter in the second quarter of 2008. Many feel this marked the end of the economic upswing. The reversal of the economic trend first became apparent in export and manufacturing. Private consumption is also dampened by declining real incomes. Tourism and construction, on the other hand, continued to expand steadily.

Against the background of rising inflation, a number of proposals for fiscal policy measures to dampen the increase in consumer prices have been advanced in Austria. Generally speaking, fiscal policy cannot address the causes of inflation, but may contribute towards offsetting its redistributive effects.

However, expenditures for food products are not expected to decline. Austrian consumers tend to save money first with goods which are not essential. Losses take place in the electronics, clothes, cars, and jewelry sectors but not so much in the food retail sector.

Prices for major food commodities have undergone a substantial rise, driven up by growing demand as well as increasing energy prices. For the next several years, prices for food products are expected to remain substantially above recent levels.

In 2007, consumer expenditures for food and non-alcoholic beverages amounted to Euro 15.6 billion. This was up 1.97 % compared to 2006. In 2007, annual alcoholic beverages and tobacco products expenditures amounted to Euro 3.7 billion.

Even though some efforts have been made during the last couple of years to liberalize the Austrian retail sector, it still remains extremely traditional with a high degree of government control. Most Austrian retailers are still not allowed to open their shops on Sundays and official holidays. This rigid control restricts the competitiveness and flexibility of the retail sector.

At present, leading German retailer groups like Rewe, Aldi and Lidl dominate the Austrian retail sector. Only a handful of strong companies of Austrian origin like Spar are in a position to compete with these foreign giants.

The two discount food retailers Hofer and Lidl are expanding rapidly across Austria. The number of hard discount stores is increasing with Hofer leading the way with 395 outlets.

This rapid growth for discounters is not only driven from the economic. Hard discounters in Austria are attracting customers by also offering of a wide range of low-priced good-quality products, both food and non-food.

Developments in the retail food sector that can be found in many products include greater demand for health food, a greater diversification and internationalization of consumer tastes and strong demand for as much convenience as possible. Variety is another strong sales driver and packaged food manufacturers are continuing to increase variety, limited editions and seasonal products.

Advantages	Challenges
Extensive travel by Austrians to the U.S. in recent years (relatively low dollar) introduced them to more American products.	Since Austria is EU member, products of other EU countries can enter the market duty free. U.S. products pay the EU duty rate.
Good image of certain U.S. products (fresh fruits, dried fruits, nuts, seafood, wine)	The major share of the population has reservations towards certain U.S. products (beef because of hormone issue; all items containing biotech ingredients). Reservations towards products with chemical food additives.
High quality of U.S. products	Unawareness of U.S. quality by consumers. Most efficient promotion (television spots) is expensive.
Population is growing (immigration).	Population is small (8.2 million) and thus import volumes small. A large share of imports from third countries comes through German wholesalers.
Food imports are rising.	Imports are coming mainly from EU countries, particularly Germany and Italy. High shipping costs from the U.S. to Austria.
Niche market for various products (like organic and health food products)	Strict compliance with EU food regulations, U.S. organic certification is not recognized in the EU
Good infrastructure, efficient distribution system, importers speak English.	Retail market highly concentrated, difficult to acquire shelf space in large supermarkets, high listing fees.
High incomes and still rising. Rising demand for luxury products such as certain seafoods.	

SECTION II. ROAD MAP FOR MARKET ENTRY

A. SUPER STORES, SUPERMARKETS, HYPER MARKETS OR SUPER CENTERS, CLUB AND WAREHOUSE OUTLETS

Entry Strategy

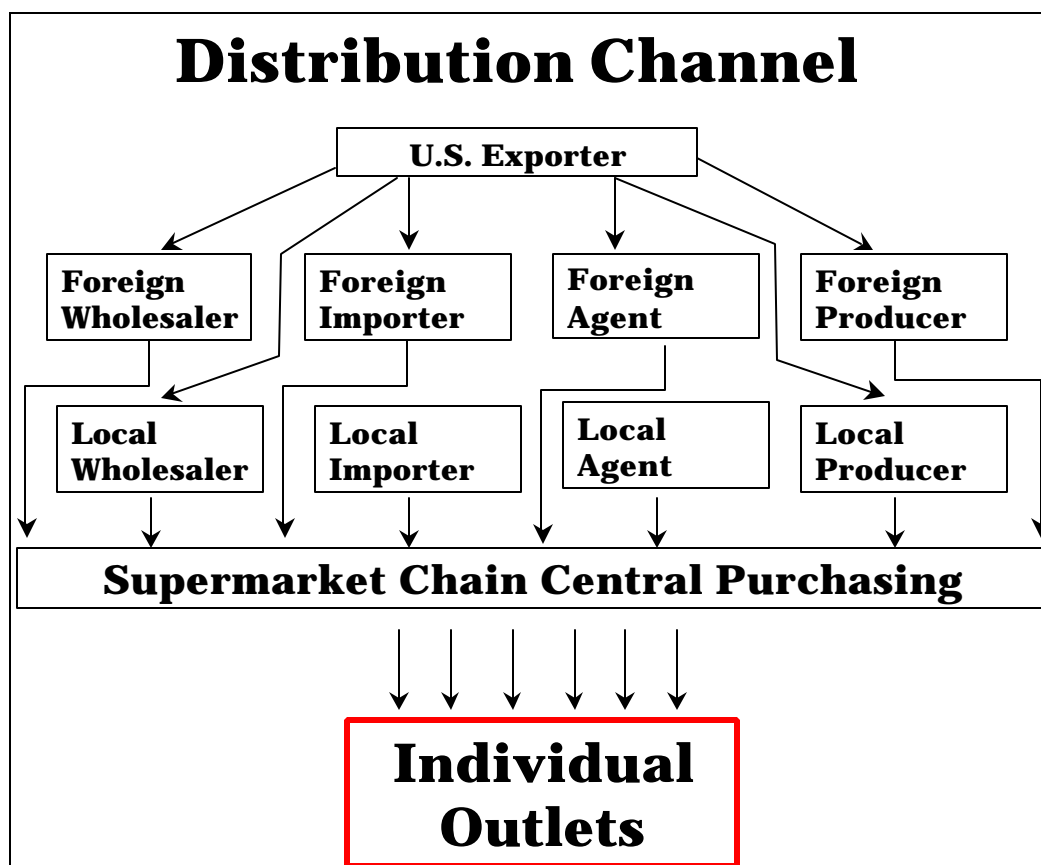

The common way to approach importers is by offering them products by fax, mail or email.

U.S. traders participating in European food fairs are encouraged to invite Austrian traders to their booths. One or more employees of the larger Austrian trade companies always attend

the international food fairs in Cologne (ANUGA) and Paris (SIAL). In addition, Austrian food traders usually visit the food fairs in Brno, Czech Republic and Budapest, Hungary. As the above-mentioned fairs are large and close, Austrians rarely go to U.S. shows.

The best way for U.S. products to enter the Austrian market is through agents with good relations with the supermarket chains. Some of the big chains import their products directly (mostly via Germany).

Market Structure

In general, retailers buy through local and foreign importers, local and foreign wholesalers, local and foreign agents, and directly from local and foreign producers. The foreign sources are mainly German ones.

The above distribution pattern applies particularly to supermarket chains. Large supermarket chains have their own warehouses from which the products are distributed to retail outlets.

Smaller companies or individual shops buy predominantly from wholesalers and to a lesser extent from producers.

Certain food chains buy some products from their mother company abroad or together with foreign companies. Some food chains own plants where certain products are manufactured.

There are importers specialized in some products or product groups and importers dealing with a large range of foods and beverages. Imported products are distributed nation-wide through their own sales force or through a network of other companies.

Direct sales to the central purchasing department of one of the large supermarket chains is the most desirable avenue, but at the same time, the most difficult way for U.S. exporters to enter the country's market.

Company Profiles

Retailer Name & Outlet Type	Owner-ship	Sales (Euro million) 2007	No. of Outlets 2007	Locations (city/region)	Purchasing Agent Type
Rewe Austria Supermarkets Superstores, Discount-Supermarkets	REWE concern Germany	4,800	1,388	Most areas	Direct, Importer, Wholesaler
HOFER Discount-Supermarkets	Aldi concern, Germany	3,152	410	Most areas	Mother company, Wholesaler, Direct
SPAR Supermarkets Superstores Hypermarket	Local	4,432	1,421	Most areas	Direct, Importer, Wholesaler
ADEG	Local	880	693	Most areas	Direct, Importer, Wholesaler
ZEV MARKANT Supermarkets	Swiss and Local	848	966	Most areas	Direct, Importer, Wholesaler
Zielpunkt, Discount-Supermarket	Tengelmann Group, Germany	720	365	Most areas	Direct, Importer, Wholesaler
Lidl Discount-Supermarket	Lidl&Scharz Group, Germany	512	168	Most areas	Direct, Importer Wholesaler

Source: WKO Der Lebensmittelhandel May, 2008

In 2007, the Austrian food retail sector grew by 3.8% and had sales of about Euro 16 billion. Due to the heavy price increases real growth (adjusted to inflation rate) accounted only for 1.5%.

In April 2008, 6,076 outlets were reported which is a reduction of 2.1% from 2007. Gainers of the last couple of years were outlets with a size between 400 to 1,000 square meters. Those 52% of retail stores made 63.6% of total sales. 171 outlets under 400 square meters closed in 2007.

The three biggest retail companies (REWE, Spar, Hofer) supported 77.4% of the domestic market in 2007. The share of discounters is already above 30%. The trend towards discounters continues.

Apart from Spar Warenhandels AG all leading food retailers in Austria are large and powerful German retailer groups that moved to Austria after it joined the EU in 1995. These large retailer groups have huge resources at their disposal, against which the local retailers are not able to compete. This has resulted in the decline of the traditional independent retailers in Austria and a structural change in the Austrian retail landscape. Some small regional or local suppliers with individual services like party service and delivery service and/or special assortment like snacks, special products, and niche products are still able to survive.

A further increase in the level of concentration can be foreseen. A trend away from hypermarkets towards large supermarkets has occurred in the last couple of years.

REWE Austria covers mainly the eastern part of Austria and Spar the western parts. The food retail market share of REWE Austria in 2007 was 31 percent, the market share of Spar accounted for 28 percent. Both big companies could still increase their market shares.

Intense competition between supermarkets/hypermarkets and discounters has led to greater efforts to copy the key success factors of the competition. Non-discounting retailers strengthen low-price products, for example by deep discounts and greater private label activities. Discounters, on the other hand, have made efforts to improve by offering more fresh products, and the introduction of organic products.

The unemployment rate compared to other European countries is low, the income situation high and thus there is a niche market for specialty products.

Since husbands and wives are working in many families, there is little time for cooking. As a consequence, the demand for convenience products is rising. In most supermarkets, home meal replacements are offered.

Due to the low-price strategy of the food retailers and discounters, the high-profile manufacturers' brands are losing out to private labels. The quality of the private labels continues to improve and the gap between the branded and private label products is becoming smaller. As a result, retailers' dependence on named brand products is decreasing. It is estimated that around 11% of all retail sales are generated through private labels. In the food retail sector, Hofer, a subsidiary of Aldi, has only private label products in its product range.

An increase in the number of private labels in the organic food sector was also noticeable in the last years, partly due to consumers perception of organic food being more healthy and partly due to food scandals. The leading private labels in this product sector are Ja! Natürlich from REWE Austria and Natur pur from Spar.

B. CONVENIENCE STORES, GAS STATION MARTS, KIOSKS

There are kiosks connected with cinemas, theaters and stadiums, which sell only sandwiches and snacks. This is also the case for the majority of train station kiosks. Only a few of them at the main stations have a larger product line.

The most important non-conventional shops are gas station marts, which belong to big gas station chains but are rented to individuals.

Gas station marts take advantage of an exemption in the strict shop opening law that allows them to sell food and sundries after shop opening hours, and on Sundays, and public holidays.

More than one third of the population buys food occasionally in gas station marts, although, due to the present legislation, these shops cannot sell frozen food products.

Consumer products sold through service station shops increased by 20% in the last five years. The strong consumer demand in the convenience sector due to a mobile population is acting in favor of gas station shops.

In 2007, the number of gas station marts stagnated at 2,773. The average size of the shops is between 35 sq m and 40 sq m, although the shop sizes vary significantly. The trend towards outlets with large selling spaces is mainly seen by the branded gas stations.

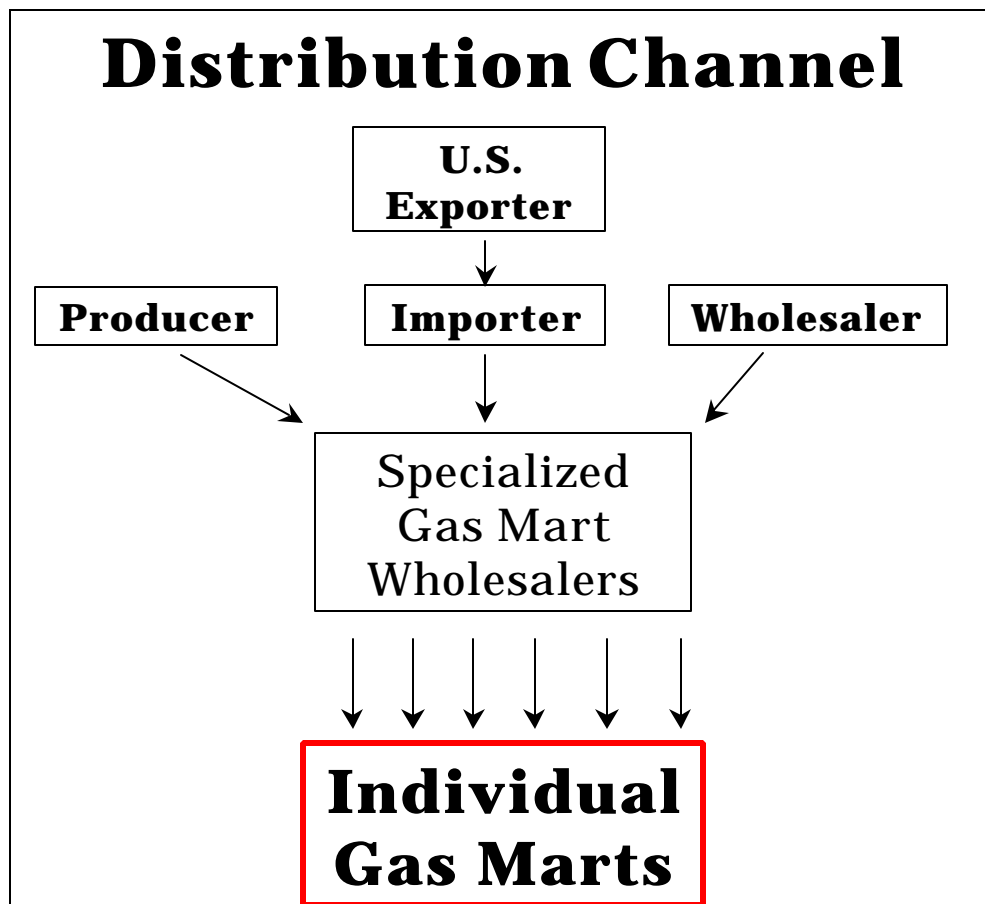

Although food sales through gas stations shops are significant, the industry believes that this figure is likely to remain stable in the future in spite of the expansion of shop retail spaces in branded service stations. Service station shops are significantly more expensive than food

retail outlets and the expansion of grocery discounters, as well as the low-price strategy of food retailers competes food sales through service station shops. Products that are necessary for daily requirements, such as pet food and drugstore articles, are showing a decline in sales and may be taken out of the product line in the future.

Entry Strategy

All offers should be directed to the wholesalers who forward and discuss these offers with the gas station marts.

Market Structure

Generally, foods and beverages are obtained from wholesalers, which have a special branch for serving gas station marts. The main companies are Lekkerland, Kinast, and Kastner. Lekkerland is by far the largest company.

Since gas station marts determine the products to be placed on shelves of their company stores, it makes no sense to offer any products to individual gas shops.

The food and beverage sales of gas station shops, which already cover a relatively large share of the Austrian food market, are growing. Among U.S. products, snacks, particularly dried fruits, nuts and various mixtures of these products have the best market opportunities.

Company Profiles

Retailer Name and Market Type	Ownership	Number of Outlets 2004	Locations	Purchasing Agent Type
Express Shopping. BP Shops	BP	600	Most areas of Austria	Wholesaler
Viva Stop & Shop-Store	OMV	550	Most areas of Austria	Wholesaler
Select	Shell	349	Most areas of Austria	Wholesaler
Agip Shop Ciao Agip	Agip	174	Many areas of Austria	Wholesaler
Shop	Esso	172	Many areas of Austria	Wholesaler
Avanti	Avanti	153	Many areas of Austria	Wholesaler
Jet-Shop	ConocoPhillips	100	Various areas of Austria	Wholesaler
Express Shop Turmoel	Doppler	90	Various areas of Austria	Wholesaler
Various	Others	85	Many areas of Austria	Wholesaler

C. TRADITIONAL MARKETS – “MOM AND POP” SMALL INDEPENDENT GROCERY STORES AND WET MARKETS

These shops cover only a small percentage of the food market in Austria and their share appears to be in permanent decline. In addition, they offer extremely limited opportunity for sales of imported U.S. products.

Mom and Pop shops buy only through wholesalers.

SECTION III. COMPETITION

Austrian total food (raw and processed including agricultural commodities) and beverage imports in 2007 accounted for \$ 10.3 billion of which the U.S. share was about 1%. In total 83% of all imported agricultural products came from the EU and 76 % of all exported goods were delivered to EU Member States. The major trading partner is Germany, followed by Italy.

From the United States, Austria imported in 2007 \$91 million worth of food and agricultural products not including significant and steadily increasing transshipments from other EU countries. Major import items from the United States included food preparations, almonds, dried fruits and nuts, and wine. As a member of the European Union, Austria has the same wide range of US/EU contentious agricultural trade issues. Long transportation time lags for U.S. commodities and duty free imports from EU countries limit food imports. Despite the challenges, there are some market opportunities for the United States, particularly in the prime quality sector.

Since EU accession in January 1995, the Austrian food processing industry has faced great economic difficulties. Products of larger food manufacturers of other EU countries are more competitive and have been coming in increasing volumes into Austria. The strongest and most competitive branch within the Austrian food industry is the juice industry.

Austria is a large net exporter of beef and has sufficient pork production. Nevertheless some quantities are imported each year from Germany, the Netherlands and Italy. There might be some market for U.S. high quality hormone free beef for the upper scale gastronomy.

There is a rising demand for poultry meat, especially turkey meat. Relatively large imports of poultry (70,343MT in 2007) are carried out each year. The main suppliers are Germany, Hungary and Poland. U.S. turkey exports would be competitive to meet Austria's rising turkey demand if the EU approved U.S. poultry slaughter plants.

Dairy imports and exports are large. Imports include predominantly fresh cheese and butter. Larger quantities are imported from Germany and Netherlands.

Egg imports (\$ 74 million) are four times as high as exports. About half of the imports are eggs without shell and egg powder coming primarily from Germany and Netherlands. Relatively large shares of imported shell eggs are hatching eggs.

Domestic fish production is marginal and limited to trout and carp. Since the country is landlocked, all marine fish, shellfish and crustacea must be imported. Total seafood imports in 2007 valued at \$415 million. Due to transshipment within the EU, the real value of imports is thought to be much higher. From 2005 to 2007, imports from the U.S. increased by 221% in value. The main seafood items from the U.S. include fresh/frozen fish and prepared seafood products. The Austrian market offers small but lucrative opportunities for U.S. exporters due to geographical separation, lower tariffs for EFTA members (Iceland and Norway) and free imports from other EU members with large seafood industries such as Germany, Denmark, Netherlands, and Sweden. However, since demand for luxury products is growing, some sales prospects exist for U.S. seafood such as salmon, lobster, crab, shrimp and related preserved fish products. A good potential market should also exist for catfish and catfish products, fresh and breaded.

For U.S. exporters, Austria's dried and processed fruit and vegetable sector and nut imports are interesting. The import value for processed fruit and vegetables in 2007 was \$167 million. The total import value for tree nuts in 2007 was \$ 82 million.

There is a strong trend for foreign premium wines. Of total wine imports, amounting to \$235 million in 2007, the U.S. share was about 1.4 percent. Main competitors include Italy, France, Germany, and Spain.

The development of organic sales in Austria is a steadily upward one. Total organic fresh produce sales are estimated to value about Euro 180 million. Already 5.2 percent of total

retail sales consist of organic products. There is demand for U.S. organic products (nuts, dried fruits, etc.) and other health food products.

Pet foods imports in 2007 valued \$166 million. In general, the major share comes from other EU countries. The predominant EU supplier is Germany. Around 2% comes from the US.

SECTION IV. BEST PRODUCT PROSPECTS

Category A: Products Present in the Market That Have Good Sales Potential

Tree nuts (including organic products), processed fruits and vegetables (including organic products), wine, pet food, convenience food, ready meals, health food products, non-biotech products.

Category B: Products not Present in Sufficient Quantities but That Have Good Sales Potential

Pecans, cranberries, cranberry jam, cranberry juice, seafood; niche market for buffalo, antelope.

Category C: Products not Present because They Face Significant Barriers

U.S. high quality beef: Presently only U.S. high quality beef (HQB) originating from cattle not raised with hormones can be imported.

U.S. turkey exports would be competitive to meet Austria's rising turkey demand if the EU approved U.S. poultry slaughter plants.

Products that have to be labeled under the EU labeling regulation EC 1831/2003 (concerning the traceability and labeling of genetically modified organisms and the traceability and labeling of food and feed products produced from genetically modified organisms) have almost no chance to be stocked in Austrian supermarkets because of the green biotech hostile environment.
